

THI-SHOW TRANSCRIPT 2021-06-22

THE FINAL COUNTDOWN There is much to be proud of in our world as an observer, even whilst their world collapses, which it has to do, but we always have to be aware of the cornered snake, and this show reveals that. For many years now I have warned of the dangers of technology, a science in my opinion deliberately not understood by the many, whilst the few take advantage of our lack of knowledge of it's implications, applications or it's wide ranging scope of what it can do. All, and I repeat all aspects of our lives are dissected into bites of data, we are spied on all day and night via more pronounced and visual concepts, but far more is hidden in a range of gadgets that would alarm the people, if the full scope of it was revealed. They can install cameras and microphones anywhere and everywhere in the most inconspicuous ways these days, and by and large the public are oblivious and unaware. Those gadgets are minute compared to the more bulkier versions the public uses. Where the word smart appears, one must learn to think of it in terms of spying, monitoring, recording and not in terms of smart being clever, but the other descriptions of smart, to burn and sting. In the past we have destroyed our civilization due to not having control and discourse over the use of advanced technology, then like now, the general public had no idea of it's capabilities, scope or potential harm and damage it could do. Tonight's technology broadcast is nothing I haven't warned against previously, this is technology on a whole new level, ongoing not in the future, but now and the past. I have said on past shows, the technology the Military Industrial Complex aligned with the SSP (Secret Space Program) which was not invented or created by Donald Trump, but has been ongoing on this planet since at least the 1940's, and possibly much earlier. The SSP is ran out of Norfolk, Virginia, Wright Patterson and Whidbey Island, off the coast of Washington state and Vancouver. Those groups have technology at least 100 years ahead of us, and potentially 1000 years ahead of us. Neither the MIC or the SSP are beneficial to humanity. I take no great delight in being proven right on things that are harmful and dangerous to us all, but this does need to go viral as it explains not only our future, but also in part what has been going on for the last 18 months. In a recent show I asked have the gods returned? those that think and act like them will be revealed in this show. This will be a broadcast on behalf of humanity, I will call it as it is, we have had enough of the child level pussy footing around, so we don't offend the people who think everything is offensive, because some other offended person tells them so, this is hammer and reality time. WHO'S GOT MY BACK NOW

This source of information contained within this show is based upon an official UK Government and UK DOD document in alliance with the German Bundeswehr office, whose leader is Wolfgang Gaebelein, and one look at his picture reveals which race he is from. Yet again that uncomfortable truth of the people who are known as Jewish, are playing leading roles in the downfall of humanity and the takeover of our planet, by those who call themselves Jews, except they are not Jews, they are the Hebrew Annunaki. The

document is titled Human Augmentation – The Dawn of a New Paradigm A strategic implications project dated May 2021.

Human Augmentation – The Dawn of a New Paradigm Strategic Implications Project: The Development, Concepts and Doctrine Centre (DCDC) has worked in partnership with, the German Bundeswehr Office for Defense Planning to understand the future implications of human augmentation (HA), setting the foundation for more detailed Defense research and development. Interesting word doctrine (from Latin: doctrina, meaning "teaching, instruction") is a codification of beliefs or a body of teachings or instructions, taught principles or positions, as the essence of teachings in a given branch of knowledge or in a belief system. Often the word doctrine specifically suggests a body of religious principles as promulgated by a church. The project incorporates research from German, Swedish, Finnish and UK Defense specialists, to understand how emerging technologies such as genetic engineering, bioinformatics and the possibility of brain-computer interfaces could affect the future of society, security and Defense. For that collaboration of countries read NATO, which is ATON and Hebrew Annunaki again. The ethical, moral and legal challenges are complex and must be thoroughly considered, but HA could signal the coming of a new era of strategic advantage, with possible implications across the force development spectrum. HA Human Augmentation or HA, we are laughing at you, you may think it is far fetched, but this is exactly how these people or entities think. HA technologies provides a broad sense of opportunities for today and in the future. There are mature technologies that could be integrated today with manageable policy considerations, such as personalized nutrition, wearable's and exoskeletons. Mature means they are old tech, as for the term exoskeleton oh my. An exoskeleton from exo means outer and skeleton, it's the external skeleton that supports and protects an animal's body, in contrast to the internal skeleton (endoskeleton) of, for example, a human. In usage, some of the larger kinds of exoskeletons are known as shells. A skeleton that supports an animals body? If you have watched the goa'uld in the Stargate series that will send shivers down your spine. The Goa'uld are the Draco and lead Annunaki, whose names are most familiar, Ra, Apophis, Hathor, Isis, Jaffa, the felinoids, and various other famous so called Egyptian names, who rampaged through many planets including this one, and left their agents behind, like Anu, Lilith, Moses, Melchizedek, Gilgamesh, Enki, Enlil and Marduk, presenting themselves as THE god(s), wherever they went and infested. There are other technologies in the future with promises of bigger potential, such as genetic engineering and brain-computer interfaces. That is not the future, it is the past, and it's ongoing now, the proof of which will be revealed later. The ethical, moral and legal implications of HA are hard to foresee, but early and regular engagement with these issues lie at the heart of success. HA will become increasingly relevant in the future because it is the binding agent between the unique skills of humans and machines. Ah the binding word again, used so often in our literature, art and scriptures, covenant and testament are binding contracts. The winners

of future wars will not be those with the most advanced technology, but those who can most effectively integrate the unique skills of both human and machine. Does anyone ask why is there a guarantee of future wars? only a child level thinking person would attest to that. But to these psychopaths that is their modus operandi, wars equals control and power, and wars generate lots of money, not one of these psychopaths considers, wars cost many people their lives, to them we are the expendables. The growing significance of human-machine teaming is already widely acknowledged, but this has so far been discussed from a technology-centric perspective. This HA project represents the missing part of the puzzle. Indeed.

Clearly they have concerns as they put up this Disclaimer: The content of this publication does not represent the official policy or strategy of the UK government or that of the UK's Ministry of Defense (MOD). Furthermore, the analysis and findings do not represent the official policy or strategy of the countries contributing to the project. It does, however, represent the view of the Development, Concepts and Doctrine Centre (DCDC), a department within the UK MOD, and Bundeswehr Office for Defense Planning (BODP), a department within the German Federal Ministry of Defense. More Liberal word salad bullshittery, they said it involves the UK MOD, and then say it is not the official policy or strategy of the UK MOD, are you people stupid? or are you incapable of making your mind up, because if that is the case, you should not be involved in planning something of this magnitude, that has wide ranging implications for us all. It is based on combining current knowledge and wisdom from subject matter experts, with assessments of potential progress in technologies 30 years out, supporting deliberations and deductions for future humans and society. Experts, oh dear, there are none in any field on this planet, as every single profession has been denied the full knowledge on every topic or subject. 30 years out is not based in fact either, try 30 years back or more. Human augmentation has many possibilities, from the super soldier enhancements, to turning soldiers into combat machines. Terminator or Avatar anyone? They did tell us we just assumed it was fiction. To understand it better, fiction is fact, and fact is fiction and then you can garner a better understanding for yourselves.

They mentioned the Bundeswehr, who or what is the Bundeswehr? Meaning literally: Federal Defense, it is the unified armed forces of Germany and their civil administration and procurement authorities. Procurement authorities? procurement also means the act of taking possession of something, that has far wider implications, host possession? The states of Germany are not allowed to maintain armed forces of their own, since the German Constitution states, that matters of defense fall into the sole responsibility of the federal government. The states of Germany are not allowed to maintain armed forces of their own, just like America, why? because they are the 3rd and 4th Reich countries, controlled and operated by Jewish El-ites in both countries. Common sense question: If the states are not allowed military of their own, why are the people paying for it? The

name Bundeswehr was first proposed by former Wehrmacht general and Liberal politician Hasso von Manteuffel. The Iron Cross is its official emblem, it is a symbol that has a long association with the military of Germany. That is a lie, it was the Prussian army symbol and had white trimmings around the black cross. The SS removed the white trimmings, the black cross was used on a flag in battle along with another symbol that reveals who owns it, the Black Eagle. Black Eagle is the SS, Hitler it should be noted was not Black Eagle but brown. The Schwarzes Kreuz is derived from the black cross insignia of the medieval Teutonic knights; since 1813 the symbol has been used to denote a military decoration for all ranks. The black cross is then connected to the Black Sun elements. As a footnote, Adolf Hitler banned the Teutonic Knights in 1938, he also banned the secret societies and Freemasons, due to those organizations operating under the Cult of Ra, all of them. He also assassinated a load of SS officers in 1933, he also set about destroying all the Rothschild's banks that was destroying the German economy, perhaps his story has not been kind to him, you decide. When the Bundeswehr was established in 1955, its founding principles were based on developing a completely new military force for the defense of West Germany. Just like the completely new so called German Military being built in Russia in 1928, the series Babylon Berlin reveals that and more. In this respect the Bundeswehr did not consider itself to be a successor to either the Reichswehr (1921–1935) of the Weimar Republic or Hitler's Wehrmacht (1935–1946). Neither does it adhere to the traditions of any former German military organization, yeah right.

The prospect of using technology to radically enhance human performance, has been the subject of intense debate over the last two decades. Some analysis has been pessimistic and cautionary, downplaying just how imminent such technologies are. Other commentators are more optimistic and foresee an impending technological revolution, that will radically transform every aspect of our lives. What is certain is that the field of human augmentation has the potential to transform society, security and defense over the next 30 years. We must begin to understand the implications of these changes and shape them to our advantage now, before they are thrust upon us. Thrust upon us by whom we may ask? Technology in warfare has traditionally centered on increasingly sophisticated platforms that people move and fight from, or artifacts that they wear or wield to fight with. I thought the word use of artifacts was strange, when perhaps the word tools would have been the more obvious wordage. What is meaning of artifact? Descriptions 3 & 5 raises much pondering. 1. any object made by human beings, esp. with a view to subsequent use. 2. a handmade object, as a tool, or the remains of one, as a shard of pottery, belonging to an earlier time or cultural stage, esp. such an object found at an archaeological excavation. 3. a substance or structure not naturally present in the matter being observed but formed by artificial means, as during preparation of a microscope slide. hmmm. 4. a spurious observation or result arising from preparatory procedures. 5. any feature that is not naturally present but is a product of an extrinsic agent. Extrinsic

means originating from the outside; external. Hmm just like the Hebrew Annunaki then, an extrinsic agent. For those new to our show and you are wondering who is this Hebrew Annunaki, go to my YT channel and check out the 17 part series of From Russia with love, it will alarm and enlighten you in great measures.

Advances in the life sciences and converging developments in related fields are, however, beginning to blur the line between technology and the human. Significant thought has already been given to what this means for artificial intelligence, automation and robotics, but comparatively little time has been given to what this means from a human perspective. This project seeks to address this imbalance, so that we can understand the potential of human augmentation and its implications. The project is a bilateral cooperation between Bundeswehr Office for Defense Planning in Germany and the Development, Concepts and Doctrine Centre in the UK. This is their description and confirms what I said earlier about NATO. DCDC produces many publications relating to the future global environment. It also has a Doctrine Team responsible for writing and maintaining a range of joint operational level UK and NATO doctrine publications, and Strategy, Analysis and Research and Legal Teams such as the Global Strategic Trends Programme. The output from the strategic implications project will be relevant to a wide audience across the defense and security sector. Whilst this is not a scientific publication, it draws extensively on research to provide an overview of where the key opportunities and threats are. Many technologies that have the potential to deliver strategic advantage out to 2050 already exist, and further advances will undoubtedly occur. Proof of earlier claim of advanced technology. Our understanding of the technical, ethical, legal and societal implications of these technologies will be decisive in, how transformative they prove to be for Defense. Our potential adversaries will not be governed by the same ethical and legal considerations that we are, and they are already developing human augmentation capabilities. Our key challenge will be establishing advantage in this field without compromising the values and freedoms that underpin our way of life. Major General Wolfgang Gaebelein who is clearly born to. Defense is never their field of operation though is it? more like bullying and attack. "Without compromising the values and freedoms that underpin our way of life" who is our? does he mean them or us all? I think we know the answer.

Aim: Scientific and technological developments related to human augmentation are beginning to accelerate and converge with other fields, such as sensors, artificial intelligence, novel materials, nanotechnology and additive manufacturing. One has to ponder on the term Covid 19 after that statement, is Covid 19 Concept Of Virtual Intelligence Directive? is 19 the date, or 1 equals A and 9 equals I, which means AI and artificial intelligence?

Audience: Human Augmentation – The Dawn of a New Paradigm seeks to inform a wide audience across the defense and security sector. It will be relevant to those involved in: policy and strategy formulation; science and technology; concepts and force development; capability and acquisition; procurement; personnel and workforce planning; and operational commanders and their staffs. Yet not relevant it seems for the people who pay for this nonsense? like hello where is humanity's say in and on this?

Scope: Human augmentation is a vast field with many linkages to other areas of study. There is no commonly agreed definition and it is known by many names, which are often used interchangeably, just like the common theme of the name changes of the people implementing it, funny that. Bauer becomes Bayer becomes Rothschild's. When we think of human augmentation it is easy to imagine science fiction inspired suits or wonder drugs that produce super soldiers, but we are on the cusp of realizing the benefits in a range of roles now. The usual seduction and sleight of hand of science fiction, which people always link in terms of thinking to the future, no it is the past. They have had super soldiers since the 1970's at least as far as I know, and all of them work for the dark forces. Human augmentation will help to understand, optimize and enhance performance leading to incremental, as well as radical, improvements. There are divergent views on how mature human augmentation technologies are and how quickly they will progress. This publication will seek to clarify this picture and identify which areas have the greatest potential for Defense. Human augmentation has the potential to impact every facet of our lives, and even change the meaning of what it means to be a human. Seriously? who made them god or Source? In reality, we have not defined which human is which on this planet yet, without distorting the picture more. I can see a scenario where the term human becomes almost as word salad liberal definitions as the gender issue. It could challenge philosophical concepts, our belief systems, and ethical and legal frameworks in ways that we have not anticipated. Well challenging the fake belief system known as religion will be a good thing, but I suspect that is not what they had in mind. This publication will cover all these issues in outline but, in the interests of the intended audience, its focus will be on the implications for society and Defense. For the purposes of this publication, human augmentation does not include leadership, and excludes technologies that bestow capabilities not directly linked to existing human function, for example, flying. Interesting last line that has many connotations.

Introduction: The ability to enhance one's physical, psychological or social capability has been a source of power throughout history, and warfare is the epitome of this dynamic. No warfare is the epitome of the child like brain, unable to act in an adult manner, due to lack of wisdom, intellect and heart centered peoples. The paradox of war is that humans are central to its conduct but are also the weakest link. We want war fighters, whether they be cyber specialists, drone pilots or infantry soldiers, to be stronger, faster, more intelligent, more resilient and more mobile to overcome the environment and the

adversary. We have designed increasingly complex technologies to enhance lethality, survivability and mobility. Technologies to enhance lethality, oh dear, another example of child level thinking, build bigger, better weapons, when you could have an adult mind and build a system capable of neutralizing all weapons, that way no one gets hurt or killed, oops common sense kicked in again. As technology has become more sophisticated, our thinking has become more focused on the machine rather than the person, but this needs to change if we are going to be effective in the future. What they are implying here is, they have gone as far as they can with machines, and humans superior thinking, creativity and power need to be added to enhance the machines more, in other words integrating. Or becoming an Integrated system that maps all of the people, now where have we heard that before? Recent advances in the life sciences and related technologies, have led to the emergence of the interdisciplinary field known as human augmentation, which has the potential to disrupt every aspect of our lives. Common sense question is: why do it then? The interdependencies and potential implications of human augmentation are so vast and complex, that it is difficult to make sense of what it means for the future of society and Defense. The aim of this strategic implications project is, to take the first step in making sense of these potential changes to human capabilities. It offers a conceptual model for thinking about human augmentation, its future direction and identifies key implications for Defense and its stakeholders. And there you have it, stakeholders, the greed based vulture capitalists that care not for humanity, just their bank balances, and the cost of life is oblivious to them as long as they wrack up lots of pieces of paper with numbers on, that incidentally have no intrinsic value.

Key observations: Human augmentation will become increasingly relevant, partly because it can directly enhance human capability and behavior, and partly because it is the binding agent between people and machines. Future wars will be won, not by those with the most advanced technology, but by those who can most effectively integrate the unique capabilities of both people and machines. All very Draconic thinking, as that is how the Draco thought, use patsies and soul diers to fight their wars, whilst they sat like cowards in offices, ships and other planets far away from danger. It is the ultimate in cowardice, and all Military Generals and others with badges of dishonor on their shoulders fall within that category, a high level coward. You want to know why I call them badges of dishonor? because getting awards for killing people is wrong, evil and child level thinking. Purple Heart? try dark and blackened heart and then you will get the picture. YOU WANT THE TRUTH? The importance of human-machine teaming is widely acknowledged, but it has been viewed from a techno-centric perspective, human augmentation is the missing part of this puzzle. Thinking of the person as a platform, and understanding our people at an individual level is fundamental to successful human augmentation. Except we are not a bloody platform, that is for computers, do you people comprehend what you are saying? Industrial Age warfare saw people as interchangeable components of military units, or the material with which to operate the platforms,

vehicles, aircraft and ships. These platforms are routinely monitored and analyzed, but it is remarkable that our ability to understand our most critical capability, the human is so under-researched. Indeed, because so called leaders and Military Generals are incapable of such understanding is why, you have lost the human touch, either by brainwashing, mind control or the MK Ultra variety, or, you are not human to begin with, it's that simple. Successful application of human augmentation demands a more sophisticated approach to understanding our people and their capabilities. Defining the key elements of the human platform, physical, psychological and social, provides a conceptual baseline to enable a multidisciplinary conversation. For a multidisciplinary conversation you have to involve all the people, not just egotistical hierarchy military personnel, who think they know better than us, reality check, you don't. WE MOVE AS ONE

Conceptualizing the human as a platform: Physical performance is the capability to affect the physical environment and move within it. Strength, dexterity, speed and endurance are key components and there is often a trade-off between them. Psychological performance comprises cognition, emotion and motivation, and the use of mind altering drugs in their case. Cognition is the mental action or process of acquiring knowledge and understanding through thought, experience and the senses. It includes processes such as attention, the formation of knowledge, long-term and working memory, reasoning, problem solving and decision-making. Emotion describes the subjective human experience and is closely linked with motivation, which is the force that energizes, activates and directs behavior. Conceptualizing the human as a platform? a platform is something you stand on, is that title indicative?

Social performance: Is the ability to perceive oneself as part of a group and the readiness to act as part of the team. It is founded on self-awareness and the ability to understand the behavior of others. It is tightly linked to communication skills, collaboration and trust. The core tenet of social performance is group cohesion. Did you mean cohesion or coercion via the Milgram experiment? or cohen zion.

Human augmentation is not a shortcut: Getting the basics of human physiology, biochemistry and psychology right is, a prerequisite to human augmentation and will become more important in the future. Research into human augmentation has shone a stark light on how little we know about how to do the basics well. Indeed and indicative. We need to do more to understand the precise effects of nutrition, sleep and hydration, and their relationship with other areas of the body to realise significant, yet untapped potential. Potential to Military people is based on their ability to weaponize it. Technology that improves monitoring will make it possible to individually optimize sleep, nutrition and other factors to deliver transformational gains, across an organization at relatively low cost and limited ethical risk. Forgetting about the high cost of lives they expend.

Human augmentation is not just tomorrow's business: There are short-term and long-term opportunities that require engagement today. The following matrix illustrates the technical maturity and the magnitude of policy considerations of human augmentation technologies. Matrix, nice terminology, not, these people are about as stupid as stupid gets, we the people are not going back into another Matrix scenario. It shows that there are technologies that could be integrated today with manageable policy considerations. The most transformative technologies, for example, genetics and brain interfaces currently sit at a low level of technological maturity, but we must be prepared for this to change quickly. Bioinformatics and collection and analytics, encompassing sensors, artificial intelligence-enabled processing are particularly important enablers for other human augmentation technologies, and warrant focused research and development attention. I guess they miss the irony of using the word maturity, because clearly they have none in terms of brain development.

Feasibility assessment: We cannot wait for the ethics of human augmentation to be decided for us, we must be part of the conversation now. The ethical implications are significant but not insurmountable, early and regular engagement will be essential to remain at the forefront of this field. Ethical perspectives on human augmentation will change and this could happen quickly. There may be a moral obligation to augment people, particularly in cases where it promotes well-being or protects us from novel threats. It could be argued that treatments involving novel vaccination processes and gene and cell therapies are examples of human augmentation already in the pipeline. There is a key line in this document, I have told you all, they have to tell you what they are doing, and that line was it. "It could be argued that treatments involving novel vaccination processes and gene and cell therapies are examples of human augmentation already in the pipeline" Yes, as we stated in the early Expose series last summer, the Covid is an experimental jab to find out data for militaristic purposes, and people hurt or dead are all just collateral damage to these people, or entities. The need to use human augmentation may ultimately be dictated by national interest. Countries may need to develop and use human augmentation or risk surrendering influence, prosperity and security to those who will. National regulations dictating the pace and scope of scientific research reflect societal views, particularly in democracies that are more sensitive to public opinion. The future of human augmentation should not, however, be decided by ethicists or public opinion, although both will be important voices; rather, governments will need to develop a clear policy position that maximizes the use of human augmentation in support of prosperity, safety and security, without undermining our values. Not be decided by public opinion, really? and Governments will need to develop a clear policy position, that is Fascism, which is Zionism. SEIG HEIL Governments are not there to dictate to the people policies that harm or endanger them, the people have forgotten their own obligation and duty to make Governments, Military and Agencies accountable to, for and

by the people. They are not paid by the public to be militaristic, dictatorship and warmongering psychopaths, we the people are responsible for allowing them that license, and we the people have to take their license away and install proper rules, protocols and means for the safety, prosperity and longevity of all. Governance in Western liberal societies and international institutions, is already unable to keep pace with technological change, and adoption of human augmentation will exacerbate this trend. Do you why Governments are unable to keep pace? because of the Military and Intelligence Agencies who run these nefarious programs, deny the Governments access to the details, based on the need to know basis, and Governments don't have the need to know with security clearances at 23, when this stuff is level 30 plus and above. All part of the National Security Zionism Act. National and international governance will be challenged by the myriad of implications of adopting human augmentation technologies. This could lead to a new arms race and inter- and intra-state tensions if not carefully managed through early and regular dialogue. A new arms race, Shiva would win that race hands down, but I digress. But here is another common sense question: if you think it would lead to unrest and an arms race, the question is why do it? What value does it have for we the people?

Economic: Economic forces will have a strong influence on human augmentation development, and they may not be in the best interests of society. The private sector can employ more resources and have greater organizational agility than state institutions, meaning that they will remain at the cutting edge of human augmentation research. Except the private sector engaged in these projects are all subsidiaries of the Military and Intelligence Agencies. Enhancements will be highly profitable, and companies are likely to focus on human augmentation that is lucrative, rather than that which is of most benefit to humanity. Yes because they are greed based psychopaths. The tension between states, societies and market forces is nothing new, but the consequences of mismanagement could be more severe in the case of powerful human augmentation technologies. Consequences of Mismanagement, well there is a red flag for a start given the Militaries mismanagement of wars, soldiers, budgets and a lack of adult based thinking. For example the Iraq war, some clowns decide to remove Saddam Hussein, just one man, and to accomplish that they destroyed over half of Iraq and murdered 208.5k civilians up to 2020, and well over a million people in total, all for one man. Now that is mismanagement and pardon the pun, overkill, and another example of a lack of common sense and child like thinking.

Personal data: The reliance on personal data to enable human augmentation will pose significant data security and privacy challenges. The frameworks to secure this data will have to be both national and international in nature, ensuring that it is easily shared and used for common good, but also well protected. They already have this in place at NATO, courtesy of globalist psychopath Robert David Steele. He and his fellow buddies at the CIA developed the open source technology that will provide the necessary platform

to implement certain sections of this program. Steele and his fellow globalist side kick needs to be ran off social media altogether. I warned of this in the Clowns in Panic show.

The Biotech age: Human augmentation is our first insight of what lies beyond today's Information Age, the coming of the Biotech age. The Biotech age will see focus on the human grow. No longer will it be adequate to regard people merely as the means to operate the machine. The interdisciplinary nature of human augmentation will render our current Industrial Age model of Defense ineffective. Defense must consider how it reorganizes to meet a future, that will demand a human-centric approach to warfare, where the person is armed with the capabilities to integrate fully into a single platform. Integrated into a single platform oh my sounds like the K.I.M.S system does it not? I hope not, but one can never tell these days. Yet more fear based rhetoric, this is how these people operate, their low vibrational field and zero soul development, places them in the field of fear, not love. That way everyone becomes the boogeyman to them.

Human augmentation is bringing about a securitization of the life sciences: Defense will need to develop a more effective relationship with those who work in the life sciences, as the dual-use nature of emerging human augmentation technologies becomes clear. Governments will need to work with the scientific community to establish a framework that safeguards and supports national security whilst supporting collaboration. Oh no not National Security again, National Security means covering up the crimes of the elites and their various subsidiaries like Militaries, Agencies, Mercenaries and Cyber operators. Time the people realized it and told them to piss off with your National Security bs, as it allows them to not reveal what is going on, what they are planning on our behalf, or what they have been up to.

Differences in national, cultural and legal approaches: This will lead to an uneven uptake of human augmentation within international alliances. This will further complicate interoperability, integration and deconfliction. Overcoming these challenges will demand closer cooperation between allies. Alliances must therefore start work now to understand how and where, to prepare for the use of human augmentation. Allies does not mean countries that are favorable to your own, allies means the el-ites junta operations that has nothing to do with the people or countries. Allies equals all lies, just saying.

Human augmentation threats: Cultural and ethical considerations will inform the extent to which opportunities are seized, but human augmentation threats will be forced upon us irrespective of our own normative standpoint. We must understand and address such threats or otherwise risk creating a strategic vulnerability. Threats will emanate from states, terrorist groups, criminals, lone actors, or even malpractice in legitimate activities. No, it will come from common sense and adult thinking people, you know the ones you label conspiracy theorists. The reality is, these people promoting this, are the terrorists,

criminals, lone actors and always have been. Protecting ourselves will demand a level of scientific, ethical and legal proficiency that outmatches the adversary, yes by hiding in bunkers like cowards, whilst sacrificing good peoples lives. You want augmentation, go and do it all to yourselves and leave humanity out of your spiritually retarded mindsets. Mitigations may not involve human augmentation technology itself, but understanding the field and developing comprehensive policies and capabilities to protect society and individuals will be critical.

Human augmentation may lead to fundamentally new concepts of warfare: In the next 30 years, increasing use of autonomous and unmanned systems from the tactical to strategic level, could significantly increase the combat effect that an individual can bring to bear, but to realise this potential the interfaces between people and machines will need to be significantly enhanced. Human augmentation will play an important part in enabling this interface and, if done effectively, it will significantly alter our force structure, equipment programme and doctrine. It is important to realise that the more human augmentation is embedded into Defense planning and practice, the more likely it is to become a target itself for an adversary; thus, counter-human augmentation measures need to be considered in parallel with the adoption of human augmentation. So, they know implementing this will create hostility, to then justify the need for it, yet another problem, reaction and solution plot.

Cognitive overload: Human augmentation will play a key role in reducing the risk of cognitive overload, as warfare becomes faster, more complex and more congested. Bioinformatics are likely to play a key role in identifying commanders and staff, with the right cognitive and adaptive potential for command and control roles. Brain interfaces linked to machine learning algorithms, have the potential to rapidly accelerate the speed and quality of decision-making. Here is a solution: Cognitive overload issues can be overcome with common sense overload thinking. As for the identifying commanders and staff, a trip to the local mental health facility will garner sufficient victims for that program. Psychopathic is the pre-requisite condition for that role I am thinking.

Today's rehabilitation tools: Tomorrow's enhancements, physical and mental rehabilitation may, in the near term, prove to be the front line of human augmentation in Defense. Advanced prosthetics to rehabilitate wounded personnel represent the cutting edge of robotics, and the latest neuro stimulation devices and pharmaceuticals, have been used to treat post-traumatic stress disorder. Further development of these treatments will not only help to rehabilitate injured personnel, but they could also pave the way for future enhancements. They lie, they have had the ability to replace whole limbs and extremities for a very long time, but chose to not share it with average personnel, only the CIA, assassins and mercenary types, I know I have seen the evidence of a fully functional hand replacement done years ago. You would never know the difference, very little scarring or

tissue and tendon damage, this despite that persons whole hand from the wrist being blown off completely.

The Public Relations spiel: In its broadest sense, human augmentation has been practiced since the dawn of humankind. Humans have adorned themselves with decorative garments to increase their social standing, or concocted substances to boost their physical performance or alter their emotional state. They have fashioned weapons to increase their prowess in combat and armour to protect themselves. Then they repeat what was said earlier. The ability to enhance one's physical, psychological or social capability and resilience has been a source of influence and power throughout history. The paradox of war is that people are central to it, but they are also its weakest link. We want war fighters, whether they be cyber specialists, drone pilots or infantry soldiers, to be stronger, faster, more intelligent, more resilient and mobile to overcome the environment and the adversary. We have therefore designed technologies to enhance lethality, survivability and mobility. As technology has become more sophisticated, our scientists have focused on machines rather than people, but this is beginning to change. Recent advances in the life sciences have led to the emergence of the interdisciplinary field known as human augmentation, which has the potential to disrupt every aspect of our lives. Indeed and it is time we the people disrupted every aspect of their lives, for our own future, our children, grandchildren and great grand children's future, these psychopaths must not be allowed to prevail. **IF YOU TOLERATE THIS**

Section 1 – Definitions: There are numerous and varied definitions surrounding human augmentation and most focus on the concept of performance enhancement. Human augmentation includes chemical, physical and biological augmentation and the modification of the human but, it is not exclusively about adding 'things' to the human, it also includes applying scientific insight to areas such as sleep management and personalized nutrition to improve performance. Modification of a human, just to fight wars? seriously have you lost your minds? Here is an idea, how about applying personalized nutrition to improve general human life, given 3B are starving or severely malnourished? This publication proposes a definition for human augmentation as: the application of science and technologies to temporarily or permanently improve human performance. Yes, for war purposes only, that is not enhancing human evolution, only keeping it at child level advancement as a species, just like the Annunaki, let us make man in our image they told you. That involves evil, child level thinking, fear, false worshipping and cowardice. This field can be further divided into human performance optimization and human performance enhancement. Human performance optimization is, the use of science and technologies that improve human performance up to the limit of biological potential without adding new capabilities. Human performance enhancement is the use of science and technologies, to enhance human performance beyond the limit of biological potential, and can include additional capabilities beyond those innate to

humans, for example, night vision. Figure 1 illustrates that the delineation between human performance optimization and human performance enhancement is outcome-based. It is agnostic of technological sophistication and whether the effects are temporary or permanent, invasive or non-invasive. For example, binoculars have been around for nearly 200 years and passive night vision devices for nearly 60 years, both are commonplace technologies, but offer significant, albeit temporary, sight enhancement. Equally, laser eye surgery is only 35 years old, more sophisticated and permanent, but in most cases only optimizes sight up to the individual's biological potential. Permanence and degree of invasiveness are also important aspects of human augmentation, and will be discussed later in this publication. Noting that night vision goggles and binoculars are technically included in the definition of human augmentation, this paper will focus mainly on the implications of novel science and technology that are more closely integrated with the human body. There is that word again novel, like the novel corona virus or bio weapon as we revealed in earlier Expose show. Human augmentation is relevant across society and Defense. People are constantly affected by internal factors, for example, ageing, hydration or disability, and external factors for example, weather, pollution or disease that lead to fluctuations in performance that can be fleeting or enduring. These guys clearly don't get irony do they? weather, pollution and disease have all been enhanced in effect already against the populace by rogue entities, when you are supposedly there to protect the people, in reality we know you are not. For example, the same brain computer interface could be used to mitigate the effects of a stroke, help to optimize a layman to perform a specific function, or enhance a specialist who needs to be even better. Seducement tactics again, appealing to peoples desire to have their loved ones made better by technology, they will never release that to the public at large. If people think brain interface is the future, think again, they have already done it publicly and created the worlds first bio human visibly seen by the general public, yet the general public didn't realize the implications of it, that human/brain interface was Dr. Steven Hawkins, a living bot, ran by a computer. Human augmentation is therefore relevant across society and across Defense, it can mitigate shortfalls, optimize existing performance and extend performance beyond biological limits.

Section 2 – The human platform: Conceptualizing the human as a platform, is fundamental to thinking about human augmentation and this project offers a model to do this. The performance of traditional military platforms of vehicles, aircraft and ships is routinely monitored and analyzed, but it is remarkable that our ability to understand our most critical capability people is so under-researched. Because intrinsically you have had no need to understand slaves and soul diers is why. Central to the approach of this project is the idea that each person must be understood at the individual level. Successful application of human augmentation demands a more sophisticated approach to understanding our people, and a way of achieving this is to define the key elements that collectively represent the human platform. These are physical, psychological and social

in nature. It is recognized that it is impossible to neatly separate the human into three distinct areas, and that this model is a conscious oversimplification. No shit sherlock!! The Integrated Operating Concept places a premium on operating, it also places a premium on adaptability, the ability to adapt to war fight, and this in turn emphasizes the importance of our people, who have always been our adaptive edge. Chief of the Defense Staff, launching the Integrated Operating Concept, September 2020, just as the Covid was about to be launched, what a coincidence that is.

Section 3 – Technology and future warfare: Whilst it is envisaged that humans will continue to be central to the decision-making process, no they won't, the machines are to replace you. Conflicts fought increasingly by robots or autonomous systems could change the very nature of warfare. Advances in artificial intelligence, robotics and autonomy mean that human processing power, speed of action and endurance are being rapidly outpaced by machines. Technology is already chipping away at people's role in war and many militaries have come to rely on it. It remains to be seen whether the Information Age will really change the nature of war, but the role of people is being challenged in three key areas: data, complexity and speed. A. Technology has exponentially increased the amount of data in the world, and the amount available to commanders. People lack the bandwidth to effectively process large amounts of data, which thickens the fog of war and increases the risk of information overload. Thus, data has to be secure, tamper-free and trustworthy, otherwise not only is it useless, it could be very dangerous if its veracity has not been checked. Or you could just do what you, the agencies and the media do, make shit up and pass it off as truth and news. Forgive me if I don't appear receptive or on the cynical side to your ideas and plans, but to date the Military of any country has not done anything beneficial for we the people. But we the people are open to dialogue should that stance change. B. The emergence of new domains and the deepening interconnectedness between them has increased the complexity of war. The information environment has also been supercharged by the pervasiveness of mass media, sensors, data and global communications. Pervasiveness of mass media, indeed, brainwashing is a better term than pervasiveness. This has led to tactical events having almost immediate strategic consequences and vice versa. C. The speed of war is increasingly beyond that in which humans can observe, orientate, decide and act. In physical terms, hypersonic's and space-based capabilities will see missiles fly near the Earth at a mile per second; too fast for humans to make crucial decisions on their own. In conceptual terms, cyber and information operations are fought at the velocity of fiber optics.

Section 4 – Humans and future warfare: As long as humans have an advantage in the areas of creativity and judgment, we will have a major role at the frontlines. When missions have a significant degree of uncertainty, require the ability to adapt on the fly, and have the chance for major reversals, the adaptability of humans is invaluable. I guess they didn't get the memo, they will be replaced as well. Technology offers significant

advantages, but there are many instances throughout history where people, not machines, have proven to be decisive. Perhaps the most profound example of the value of contextualized human judgement is Stanislav Petrov's actions in 1983, where he averted a nuclear war by overriding a Soviet automated early warning system, that had incorrectly identified a United States missile attack. Or how about in the past or future timeline where the AI went rogue and caused a planetary wide nuclear war? Today, the risk of over-relying on technology has perhaps never been greater, because its pervasiveness has conditioned us to rely on algorithmic judgments in so many aspects of our daily lives. We must remind ourselves that people have, at least for now, the edge over machines, and will continue to have a role in future war for three key reasons. Because the god for the computer is the programmer, the programmer is its god, without the input of the humans the machine cannot function. The key is whether the programmer is dark or light. A. War is, by its nature, a human Endeavour. That is not correct, that is the image of those who manipulated us in their image. If you did a survey of the worlds people 90% plus would avoid war at all costs, so it is not a human endeavor at all. The sheer arrogance and ignorance of these so called people is there for all to see. So far, technology has not changed the nature of war, but it has changed its character. People will still be central to war but the way in which they play this role will change. This may mean less combat troops and more cyber specialists, drone operators and computer technicians in the future, but the stress and threat to life will likely remain, albeit manifested in different ways. Yes the threat to life will remain but not for these cowardly pen pushers, hiding in bunkers at our expense. Warfare is likely to be more remote and psycho-cyber intensive, but the aftermath will still require boots on the ground. B. Humans remain unrivalled for now in their general intelligence. When the unforeseen happens, people will be required to step in to fulfill the mission, avert crises or seize unforeseen opportunities. C. Technology will become increasingly capable, but society will influence the pace and extent of its adoption. Bravery, skill and honor have been ingrained into our societies for centuries and this will not change overnight. Outsourcing war to machines so that blood is not spilt might reduce the human cost of conflict, but inadvertently increase its likelihood. Common sense question then is, why get involved in war if it is going to cost lives? War is the last refuge of the incompetent, it is not a starting point, this is what you people have been brainwashed into non thinking. It is the same at all high level meetings whether on the ground or in space, as above so below. Each race sends their warriors/Generals and Military personnel to act on their people or beings part, yet no one will give an inch because they think it makes them look weak, Newsflash, you are all weak and cowards. Playing the my guns are bigger than yours card over and over again, all about war, not one of you thought about what about peace. It is not weakness to engage, be flexible, come to agreements, it is a strength. Thousands of years of evolution and you people have still to master that basic understanding of common sense.

Section 5 - The case for human augmentation: Here comes the big sell and marketing ploys of the snake oil salesman. People are Defense's most valuable asset but also a key vulnerability. People get hungry, tired, scared and confused, machines on the other hand are incapable of these things but have weaknesses of their own. The winners of future wars will not be those with the most advanced technology, but those who can most effectively integrate the capabilities of people and machines at the appropriate time, place and location. The growing importance of human-machine teaming is widely acknowledged, but this has been discussed largely from a techno-centric perspective. Human augmentation represents the missing part of the puzzle, and will become increasingly important over the next 30 years because of three key drivers of change. Accelerating progress in science and technology means we can do more. Who is we? we have made massive strides in science and technology over the past 100 or so years, and yet so little of it has been passed onto we the people. The only technology given to the people has been weaponised against us. Massive advances in medical, transport, space travel, health, weather, ecology and ecosystems, energy, of growing food, all denied to we the people. So, it is disingenuous to promote advancements of this, when all other technology has been denied to us, or weaponised against the people. There are opportunities and threats that mean we should do more. What opportunities? money making? control? power? and who are these boogey men threats? the usual Russia, China, N. Korea or Iran, or something else, and if it is something else, why haven't you informed the people? Changes in society mean we want to do more, can do more, ok that is simple, then tell the public the truth. There is a growing sense that we are moving towards a frontier of unprecedented opportunity to improve humanity, which means we can do more. I am sorry but we have had that over a 100 years or more and your ilk denied it, what makes us think you wish to share technology or advancements now? The fields of biomedicine, neuroscience, synthetic biology, computation, material technology, biomechatronics and social sciences have developed at pace, to make possible what used to be the preserve of science fiction. Science fiction is largely based on science fact, those with higher security clearances will know that as fact. Notwithstanding significant ethical and legal challenges, the science behind these technologies has been proven and cannot be undone. So, if you build a war based human augmentation shell, that can't be undone? do you realize the implications of that statement? The origin of many augmentation ideas of applications lies in the health care sector, uh oh here comes the snake oil again, like the med beds promises by several rogue alt media have claimed is coming. Large technology and pharmaceutical corporations see the economic opportunity in human augmentation, and are investing heavily in these technologies and rich elites are also investing huge sums to develop life extension technologies. Ah the rich elites or EL-ites to give them their correct term, yes those entities have done that for thousand of years and they all seek one thing, life longevity, not because they wish to experience the joys of life, but to control others, just like their fake gods of the past. These efforts will drive

human augmentation development, making it more accessible. The key question is how societies will embrace it and adopt it and for what purpose.

Should do more: The therapeutic benefits of human augmentation could help us to lead happier, longer and healthier lives, free from chronic illness and heritable disease. All sounds great, but authorities like the DOD and Governments, along with rich El-ites have denied that to the public to date, so why should we believe you now? The answer is we don't. It could protect us against pandemics, or at least provide us with the tools to react more effectively to them. Haha these people are comedians, protect us from pandemics? it was the Military and agency goons who created it, FSS. Brain interfaces mixed with augmented and virtual reality, could dramatically enhance our experiences and our ability to express ourselves. The majority of people are already in virtual reality, as their world and thinking is far removed from the real world, it defies comprehension. New concepts of intelligence and higher levels of creativity could emerge by connecting brains with other brains and/or computers. Yet, the people have been dumbed down and creativity destroyed, whilst the Military, Agency and think tank goons creamed off the crop of the few who are intelligent, and have left the vast majority of people unable to do basic math, speak coherently, think for themselves and act, and too many walk and talk like a bot. The benefits of human augmentation are so profound that they could be considered the stuff of fantasy, but perhaps no more so than the proposition of landing on the moon might have seemed in 1950, except they did, in the 1950's and possibly sooner, not the fake public version of 1970. The only fantasy are those who produced this, thinking it is benefitting humanity, when clearly it is not. I am glad they referenced the moon, as from moon derives the word luna-tic. There are risks inherent in human augmentation. Yes risks are so great you are yet to comprehend them. The COVID-19 pandemic has exposed our vulnerability to pandemics, and unchecked use of human augmentation could be used to increase the risk and severity of them. What a snake oil fear based statement that is, again child level, if you don't agree with human augmentation we are going to have more pandemics is essentially what they are saying. Threats could emanate from states, terrorist groups, criminals, lone actors or even malpractice in otherwise legitimate activities. I will repeat what I said earlier Military, Agencies, criminals and lone actors called the Manchurian candidate having been MK Ultra'd are the terrorists. Protecting ourselves may not directly require human augmentation, but understanding the underlying technology and developing comprehensive policies and capabilities will be critical.

Want to do more. Happiness, well-being and longevity are moving up the human agenda, except we won't do that with fake pandemics, lockdowns, fascist rules and fake vaccines. There is also a growing realization that wealth and productivity, the standard metrics of individual and societal success, do not necessarily equate to happiness or fulfillment. Finally some truth and that statement is correct, your value is not judged by materialism,

your real value is soul development, human augmentation is NOT soul development it is destroying it. While most people still want to be wealthy and have good jobs, they also want to be fitter, healthier and more attractive. Human augmentation will be seen as a means of fulfilling these desires, why is a Military document revealing this then? Watch the movie Extinction and you will get a better idea. Common sense question again, does anyone think about or know what they will do with the soul/spirit packages after transferring the human to a machine?

Diffusion of advanced knowledge. The diffusion of advanced knowledge of the human body will be a key driver for human augmentation. Social media and algorithms designed to push information to interested people, is leading to specialist information being readily available. Although bogus information is spread, in the vast majority of cases societies are much better informed about how the human body works and how to look after it. Social media is also fuelling people's desire to be fitter and healthier, and this will increase demand for human augmentation in the future. Increasing body awareness, particularly among young adults, indicates a generational change in attitudes toward health. Oh dear after stating a bit of truth in the last paragraph, we are back to utter lies and drivel again. Social media is only driving non thinking, all medical information has vast missing pieces for the whole picture, so much so, we need to rewrite the whole medical journal all over again. Social media is a Fascist dictatorship not a pusher of benefits for humanity, denying the truth to the people is not a benefit to humanity in any way shape or form. The use of technology in professional sports has also increased significantly over the last 30 years and, as it becomes less expensive, is cascading into recreational sport and everyday life. That is called cheating, used in every major sporting event to allow the money makers to collect the most prizes and funds. This is putting personalized biometric information into the hands of millions of people and enabling them to track and improve their performance. If that is the case, why did Christian Eriksen the soccer player nearly die of heart inflammation last week? Why didn't biometrics pick that up, and why has your social media driver of giving specialist information, deleted and banned all comments related to Eriksen and him having the Pfizer techno jab twelve days prior? NOTHING ELSE MATTERS

Human augmentation technologies: Section 1 – Understanding the human body The human body is incredibly sophisticated and understanding how it works is fundamental to successful augmentation. Our brains are more complex than any other known structure in the universe. Human bodies are complex ecosystems hosting ten times more bacteria cells than cells of their own. People are unique: each person smells different, walks differently, hears differently and responds to medication differently. Understanding how the body works is a monumental undertaking but recent scientific and technological developments mean that, increasingly, we can unlock the secrets within the 3×10^{14} cells in a human body. The common sense question then is: why meddle with it, for what is

essentially for war purposes only, I don't buy all the flim flam of human development or health, as you have never given any previous consideration for it.

Side effects and unintended outcomes: The relationship between augmentation inputs and outputs is not as simple as it might appear. An augmentation might be used to enhance a person's endurance, but could unintentionally harm their ability to think clearly and decisively in a timely fashion. A bit like a Military person then, as their ability to not think clearly is there for all to see, once you go beyond the Patriotic flag waving illusion. In a war fighting context, an augmentation could make a commander more intelligent, what an oxymoron that is, if you had intelligence you would not be in the military to begin with, I'm sorry if that upsets your delicate egos, but it is true. Only a non thinking idiot thinks sacrificing themselves in a battle for lines on a piece of paper called countries, is a valid cause. I know that may sound harsh to some or many, but in overview it is the truth. Where has the worlds bestest, fastest, greatest Military been whilst tyranny and coups have taken place on our own soil the past two decades, never mind previously. CIA ran Bush clowns, Blue Dragon and global psychopaths The Clintons, a non American born Muslim, a game show host and now a man walking around in a mask portraying himself as Joe Biden. Please tell the American public what you did about that? nothing, why, because you haven't informed the American public you are not allowed to engage in support of the American on your own soil, oops. That is why they had to send out the National Guard for the foreign paid domestic terrorists rampaging through American towns last year, and the media ignored it. So no, those statements are not harsh, they are the facts, but hopefully in the future you can change those facts and come and help the American people. We would welcome if you had a change of heart on this matter and prepared to work together as we should all be doing. But they maybe less able to lead due to their reduced ability to socially interact, or because they increasingly make unethical decisions. Even a relatively uncontentious enhancement such as an exoskeleton may improve physical performance for specific tasks, but inadvertently result in a loss of balance or reduced coordination when not being worn. The notion of enhancement is clouded further by the intricacies of the human nervous system, where a modifier in one area could have an unintended effect elsewhere. Variation between people makes designing enhancements even more challenging. Yes the side effects and unintended outcomes is known in Military terms as collateral damage, that is deemed acceptable in the desire to win a war or generate income. To an adult thinking person, no one wins in a war, get that into your heads.

Understanding: The answer to the conundrum of unintended outcomes, is to invest as much effort in understanding the human body as we do in optimization or enhancement. We therefore augment not only to improve human performance, but also to understand it. As our understanding of the human body improves, so too does our ability to optimize performance without resorting to invasive, permanent or controversial technologies.

Collecting and analyzing data on human performance can identify aspects of individual behavior (for example, diet, sleep and activity) that can be adjusted to deliver performance gains equal to or better than drugs or surgery. Which is exactly what the Covid experimentation job is designed to do, is it not? collect data, analyze data, monitor the side effects to then enhance the techno job further and appease the stakeholders. This is where understanding human genomics and epigenomics at the individual level is absolutely essential, it is not 'one size fits all' and is not dissimilar from the concept of personalized medicine, in other words the right drug, at the right dose, to the right person at the right time. Covid 19 jabs are a personalized medicine, they all have individual bar codes to connect to the right person taking it.

Sleep: Increasingly sophisticated ways of studying the brain while we sleep is producing a wealth of data, that we are only just beginning to understand. No you understood it years ago, which is why you use sleep deprivation as an element of torture. The benefits of adopting good sleeping patterns will deliver huge benefits to both individuals and society. Yet, how many hours do you allow your own soldiers to get sleep? drugging them to stay awake for extended periods, that leaves the soldier an addict, PTSD and often unable to return to a normal life, please explain that. Nearly every aspect of our daily lives such as mental and physical health, public safety and productivity would improve, yet so many individual and organizational approaches fail to recognize this. Including your own Military branch, the sheer hypocrisy of this is astounding. In a military context sleep optimization is difficult to employ but important to get right, since it directly affects physical ability and resilience as well as attention and decision-making.

Personalized nutrition: Improved understanding of our genetics and general health could make precision nutrition a realistic possibility. Diets designed around an individual's biology have been proven to help prevent disease, and improve physical and psychological performance. As an example, the trillions of bacteria, viruses and fungi that live in our gut, collectively known as the gut micro biome differ in all of us, and understanding foods that best interact with them can yield significant benefits. Then why are the authorities feeding us shit then, plastic rice, horse and dog meat and even parts children in burgers, yes you McDonalds, please explain why the authorities allowed that? if they are so interested in our health. That has to be the worst punchline in history, we are interested in improving your health. This science is only 15 years old and further research is required, but it has already shown how individuals respond differently to the same diet. To the Military it might be 15 years old, in reality it goes back much further. An estimated half of adults in the UK take supplements on a regular basis. Which clearly don't work as there is zero evidence that half the country is more healthy. In fact viewing the UK these days I see over half the country replicating Americans of the last century and being massively overweight, so where is the evidence of them being more healthy? This market is expected to grow to over £12 billion by 2023, all peddled by snake oil

people. This trend is being replicated in other developed countries. Categories include sports nutrition, weight management, vitamins and dietary supplements. The market is, however, fuelled by misinformation and regulatory challenges, not to mention varying rates of effectiveness of the products. Indeed and there is no banning orders, deleting posts or pages for those people is there, funny that. For example, while creatine has been proven to increase power output and endurance, results vary, to be effective, its use must be tailored to the individual.

The future of wearable's: Listen closely to these descriptions and think of the implications and other possibilities. Current or emerging technology in this field includes: increasingly accurate heart rate monitoring; earrings that measure body temperature and pulse; shoes that generate their own power to sense bodyweight and movement; contact lenses that analyze tears to predict your emotional state and project information; clothes that sense your physiology and give you small directional taps on your shoulders to provide screen-free Global Positioning System (GPS); and 'smart buttons' in clothes that collectively understand your habits and inform other linked technologies, from car to coffee machine to optimize your life. Wearables to monitor chronic health conditions such as diabetes are a notable growth area, and may even develop towards closed-loop systems that measure and treat symptoms in the future. We have had enough of closed loop systems, but Oh dear so much wrong with that short passage, again all I warned of with these fitbits and other bodily gadgets, they are not for your well being, they are spy tools to be used against you. Plus we will never know if these body gadgets will have inserted a self destruct button that will delete you. Just because you can't comprehend that level of evil, does not mean they are not capable of doing it, THInk different. All technology and gadgets have a chip, for now they have by and large used it to spy on us, we are all blind to what is contained within the programmed data of the chip, including those installed in the PCR test and the Covid techno jab.

Collection and analytics: Devices that track movement, heart rate, oxygenation levels and location are already commonplace and will become increasingly accurate and sophisticated, making it possible to gather an increasingly wide array of performance data in real time. You have done that for the past 30-40 years and perhaps longer, how much data do you require before you stop becoming voyeuristic perverts? We can also analyze data in ways that were impossible even five years ago. Artificial intelligence can analyze massive sets of information almost instantaneously, and turn it into products that can inform decision-making. Yes, so bot like people incapable of thinking for themselves, can sit back and let machines run everything, they will replace you unless you start to think outside of Government and media. This marriage of data collection and analytics is the foundation of future human augmentation. Take a bow Robert David Steele and his OSS group, which is likely connected to the Bundeswehr group involved in this, alongside NATO. Steele willingly or unwillingly has committed humanity on a path of

mass die offs, zero privacy, invasions and destructions of our freedoms and should be held accountable for war crimes against humanity, along with his cronies. It is ironic that two years ago today I outed Robert David Steele in this plot against humans, in the Clowns in Panic show, this document reveals the deeper, hidden end to their game. The end is transhumanism, the augmenting of humans into machines, for their own child level mindsets of wanting control over people, animals, birds and all the other creations on this planet for their own ends. This is what I warned you all many, many years ago of the dangers of technology, our chronic lack of knowledge of understanding it, our lazy minded thinking this is all in the future, when it is long in the past. Human augmentation they are presenting in this piece is not them telling you the future, they are revealing what they have already done, and will continue to do, and yes the Covid techno jabs are part of this scheme. Our chronic lack of future thinking to see where it all leads to, you want me to point it out for you in clear terms. Transhumanism is the end of humanity and the end of this special version of creation, as the Military clown who wrote this said, "it can't be undone" Message to the Military, Agencies, El-ites, Royals, Hebrew Annunaki, multi title holders and vulture capitalists we the people are ready for you, you will not prevail with your unsane child level, greed and power based thinking. We will replace you all, with adult thinking, peaceful, loving, caring and sharing people, that will not distinguish people by color, race, country, gender or banal political parties, a party is the realm of the clowns. We will prevail and triumph, and go onto develop this planet in a much better, fairer and safer way than you all ran it. Devoid of fear, lies, disease, confusion and bountiful amount of real knowledge, growth and truth. WE WILL ROCK YOU

We opened with the final countdown song, and this show is in essence telling that story, is it the final countdown for humanity or the clowns, fake gods, child level thinkers who have hampered this race for hundreds of thousands of years. The crown of creation reduced to slaves, pawns and bots, batteries for the weak who are incapable of controlling or running themselves. What this essentially means is and let me tell you all in plain English, all you clowns promoting this, they at the top of your drastically reduced control system will replace you all, with machines. The hierarchy of control goes way beyond your useless security clearances, so much so, you are not capable of comprehending at your levels. Should you wish, I will offer a platform for you all to come and learn what is and has really gone on, on this planet and what you are following like blind sheep. Do you have the fortitude to learn from people who don't have security clearances, are not riddled with badges of dishonor, not part of some secret society and not interested in personal gain? well do you? I will repeat again robots will be replacing 70-90% of jobs, all of the police, most of the military, all of the agencies and eventually all of the governments. One world Government and central control power all ran not out of DC, not out of the City of London, not out of the Kremlin or the Vatican, but out of Jerusalem, the past land of the fake gods. DO YOU UNDERSTAND THE WORDS COMING OUT OF MY MOUTH

This is the precursor to transhumanism, considered a conspiracy theory by many, dismissed by many because they were told it was the future, you people have no idea. This is replacing man, woman and child with machines. DO YOU UNDERSTAND THE WORDS COMING OUT OF MY MOUTH

To all the religious people, despite you all being involved in a fake program, time will reveal that to be an unpalatable truth also. You all believe in a god, so will you allow these psychopaths to replace gods creation? or will you do what you always do and sit on your asses and wait for the savior, that never arrives? Would your god wish you to do that? or would he wish for your to fight for yours and his creation? The reality is these people or entities are yet again wishing to play god, and the great question is: who made them god or Source? Who gave them the right to turn a living organic creature into a bloody machine? Is that what you wish for your future, what about your children and grand children? you don't die to save them, you live to save them. Message to the Galactic Council, whilst some progress has been made, there is a marked stall in progress over the last 18 months. We the people with this broadcast have and will make our case, that humanity in it's current living creational form should be left untouched. I am asking all people who listen to this to say hear, hear to that statement and re-affirm your position and stance upon the matter. We are asking you and the UR Council to honor the peoples wishes, and we are asking for your full knowledge, logistical and direct support in this urgent matter. Our peoples and planet is at stake here, and we request some support in the matter. Whilst others have stalled on the Restoration of this planet, we in this group have gone about restoring the people to their greater potential, and have had many successes with that, and we are expanding upon it. We have had enough of the talk, we now require on the ground actions in protection of our peoples.

To the Military, Governments, Agencies and whoever else is involved in this, the final song name is, Hello my name is human, you people need to listen to the words and stop trying to replicate your fake gods. The fake gods where and are an abomination of creation, they are more a creation of technology, than Source. They are the Lord, God and other names of the bible, they are not our god and never where. They are the technological gods, the AI sky gods, you are their pet disciples, their bitches, their pawns, their batteries and their energies. They rely on your life force energy, they used and played you like pawns, why? because you are all child level thinkers. Riddled with insecurities, riddled with self doubt, incapable of making decisions yourself and all sit their like lap dogs waiting for the false gods to bark out orders. It is you who are the sheep, following the unsane herd, leading them to their death and doom, and ultimately your own if you refuse to follow their orders. Just as Moses and the fake chosen ones, refused orders and the Lord or God sent fiery serpents after them, are you men or mice? Hello my name is human, not hello my name is human augmentation you complete child

level jackasses, Rothschild's was right about you all along, he said you were all jackasses. Kissinger told all you Military you were mere pawns, now I wonder why he said that? because you are, all of you. Samuel Johnson (1709-84) was responsible for compiling one of the versions of the English dictionary. He said 'Patriotism is the last refuge of the scoundrel.' said over 300 years ago, and yet it applies now. Why? because Patriotism has hidden hooks, it means the love of your country over the love of it's people, wrong thinking. Soldiers are not Patriots, they are pawns of the system of control. You are not fighting for your country, no war has ever been fought for the country, only the system overlords. They are passed off as Patriots, but in essence they are being Patronized. Patriotism is Fascism, Fascism is Communism and Communism and all other political isms is Zionism, the realm of the Hebrew Annunaki and the fake gods. At which point do you people grow up into an adult thinking advanced species? or will you continue to hamper this planets progress with your child level minds? To date you have prevailed ruining this planet with child level thinking, now and the future you will not. Yes, that is a warning, take off your diapers and bibs, spit out your dummies or pacifiers and come and join a humanity being built in our image, not yours or theirs. MY NAME IS HUMAN
